# **Fire Ant Products for Tennessee's Schools**

## **Sorted By Active Ingredient**

Intended as a supplement to UT Extension PB1788 Managing Fire Ants in and Around Schools,  
<https://utextension.tennessee.edu/publications/Pages/pestMngmt.aspx>

One of the most efficient ways to manage fire ants on school grounds is to broadcast a fire ant bait. Treating individual mounds can be expensive and requires more time and effort to scout for all the mounds, and often the smaller mounds are overlooked. In this publication you'll find a list of fire ant baits and their estimated costs. Products and their estimated costs are also listed for individual mound treatments or other broadcast applications should these be deemed necessary as suggested in PB1788. If baits are broadcasted twice a year, often other treatments are not needed. This is not a complete listing of all fire ant management products. Prices will vary but are provided to give a relative comparison of cost.
